

# Improved red fluorescent genetically-encoded calcium indicators for *in vivo* imaging

Hod Dana, Boaz Mohar, Yi Sun, Jeremy P. Hasseman, Getahun Tsegaye, Graham T. Holt, Ben F. Fosque, Eric R. Schreiter, Stephan D. Brenowitz, Vivek Jayaraman, Loren L. Looger, Karel Svoboda, Douglas S. Kim  
Genetically-Encoded Neuronal Indicator and Effector Project

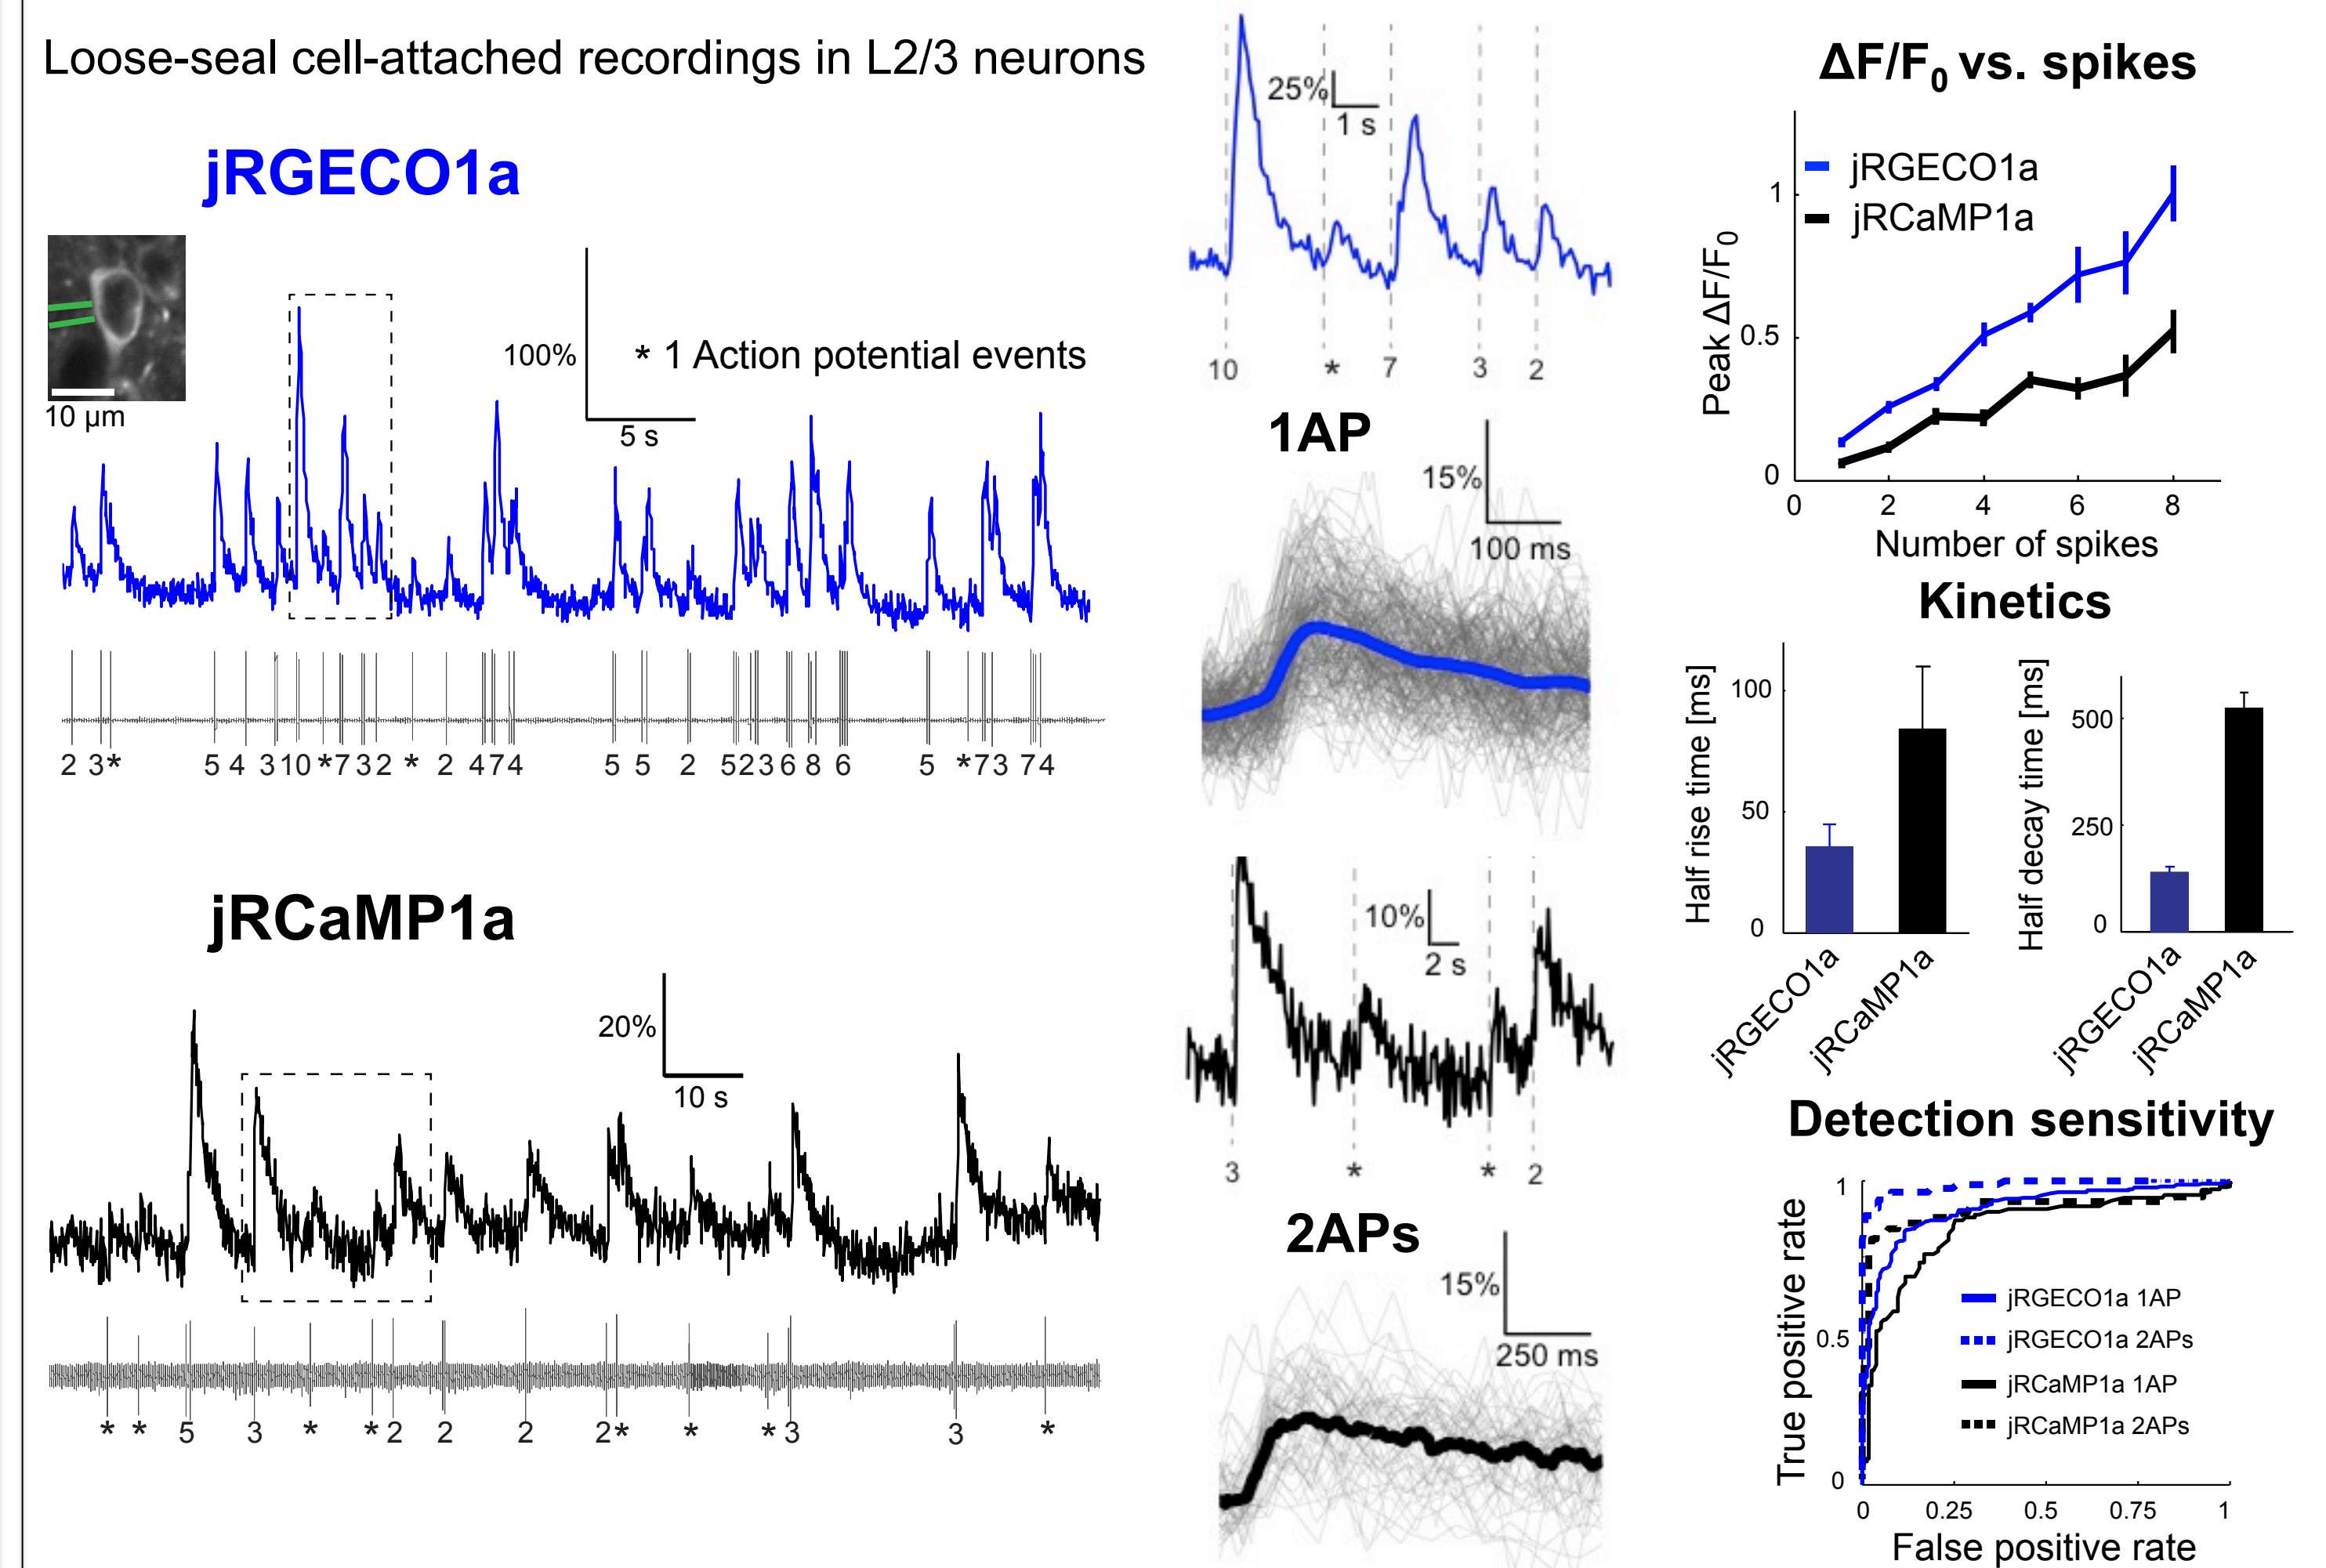

## Motivation

- Optical imaging of calcium dynamics using genetically-encoded calcium indicators (GECIs) is a powerful tool for systems neuroscience
- Current state-of-the-art GECIs emit green light (green GECIs)
- Red GECIs may be used for:
  - Deep tissue imaging
  - Dual-color imaging
  - Parallel use with light-sensitive ion channel (ChR2)
- Here we present high-sensitivity red GECIs, **jRGECO1a**, **jRCaMP1a**, and **jRCaMP1b** for *in vivo* imaging of neural activity.

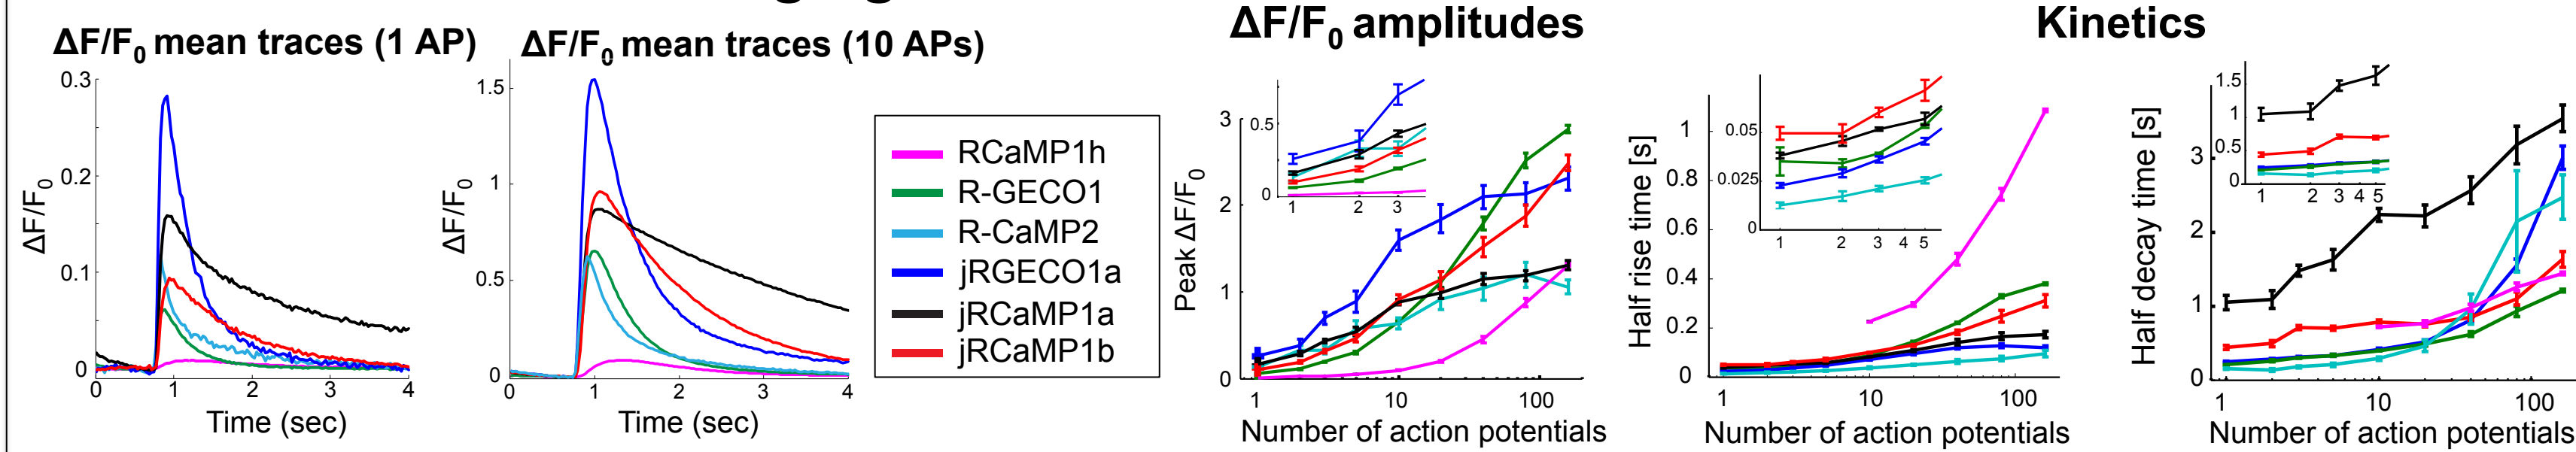

## *In vivo* functional imaging in V1

## *In vivo* relationship between spikes and fluorescence dynamics

## *in vitro* functional imaging

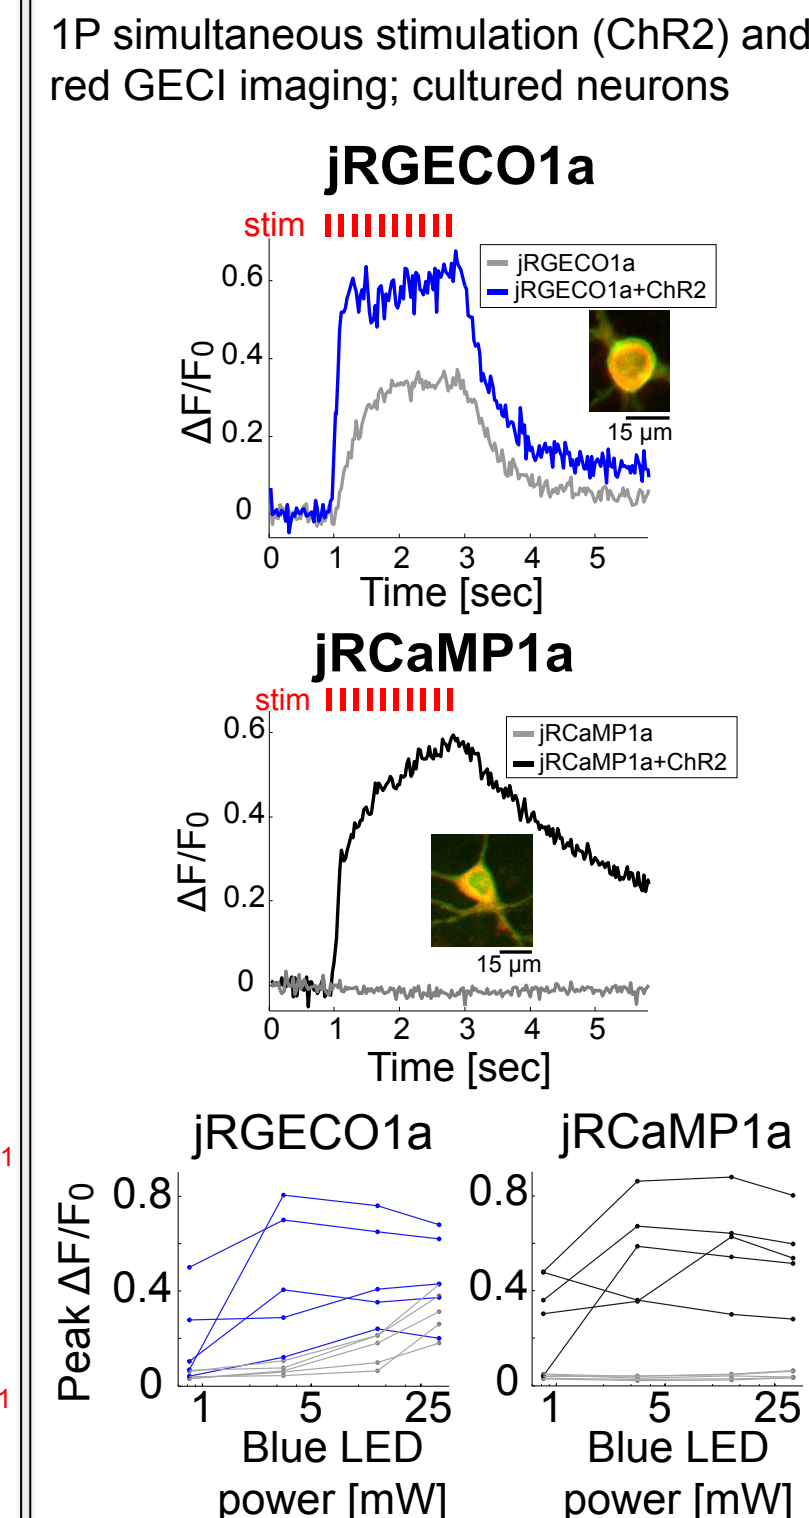

## jRCaMP1 variants screened in cultured neurons

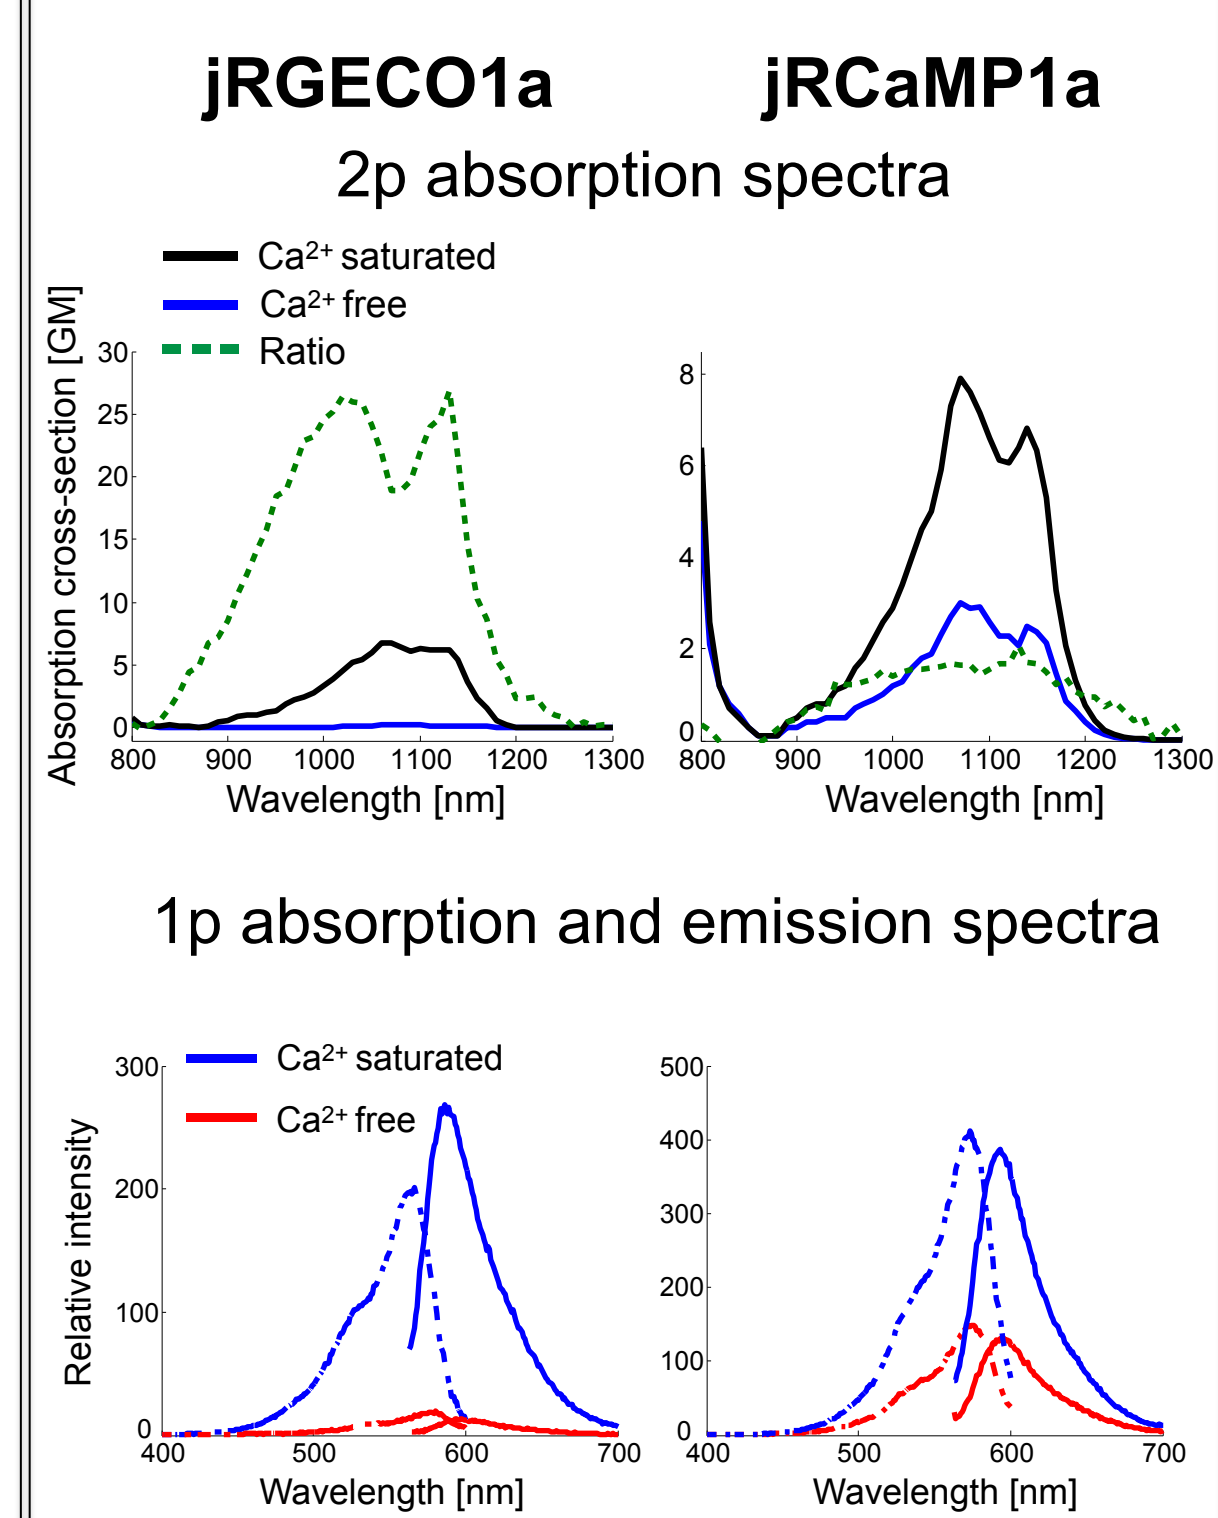

## jRGECO1 variants screened in cultured neurons

## Photoswitching

## Absorption and emission spectra

## Conclusions

- New **jRGECO1a**, **jRCaMP1a**, and **jRCaMP1b** indicators have improved sensitivity and kinetics
- jRGECO1a** *in vivo* performance is similar to GCaMP6
- jRCaMP1** indicators combine improved sensitivity and photostability
- Reagents distributed through Addgene.org and Penn Viral Vector Core**
